

C2.5 — Shot Convergence Analysis

Minimum shots for $|\Delta F1| < \text{tolerance}$ (finite-shot proxy)

(a) Convergence of F1-macro to Statevector Baseline

(b) Finite-Shot Feasibility Threshold Table

Tolerance	Min Shots	Actual $\Delta F1$	Fro. Sim
$\Delta F1 < 0.01$	128	-0.0095	0.9970
$\Delta F1 < 0.02$	128	-0.0095	0.9970
$\Delta F1 < 0.05$	128	-0.0095	0.9970

Finite-Shot Proxy Summary

- SV baseline F1 = 0.7796
- Max degradation = +0.0100 (shots=2048)
- Smallest $|\Delta F1|$ = 0.0000 (shots=8192)
- Train MAE 128→8192: 0.01518→0.00188
- Test MAE 128→8192: 0.01534→0.00185

Trend is consistent with reduced sampling error as shots increase.
